Preferred by Leading OEMs

Maxima is a full-service, global electronics company specializing in custom-engineered and standard vehicle instrumentation, controls, components and systems for severe-duty applications. Our products are preferred by leading "blue-chip" off-highway OEMs such as **AGCO, Caterpillar, CNH, Deere, Ingersoll-Rand** and **Kubota**, as well as companies like **Harley-Davidson, Linde** and **Textron**.

6-Sigma

Since 2001, we have employed Six-Sigma design and manufacturing techniques to ensure that products are on-target with respect to performance, function and cost. *This is one reason why Maxima was selected as a long-term strategic partner with CAT in 2004.*

Full-Service Partner

Maxima can manage your entire development process, from concept to customer to after-sale support. Starting with our unique industrial design capability, products are designed, tested in-house and launched in as little as 6 months for programs on a fast track.

Maxima's designs set a new standard in AG & CE markets in Europe & the U.S.

Market-Driven Innovation

Maxima collaborates with OEMs to understand dealer and end-user needs as the starting point for our Design-to-Target process, with an emphasis on systems integration and product value. The result? *Products that achieve functional improvements AND cost reductions.*

Custom-Engineered & Standard Products

Maxima provides custom-engineered products and a wide array of standard, "off-the-shelf" instruments that are ideal for SEVERE-DUTY.

Examples include:

- Standard instrument clusters
- J1939 Multi-Function Display (MFD)
- Data-bus or analog gauges
- Specialty gauges (e.g. digital tach)
- Electronic and LCD hourmeters
- Fuel, temperature, pressure senders; fuel/speed sensors; switches

Maxima products are designed for severe environments with an emphasis on superior reliability and durability.

Global Operations, Local Reach

Maxima is a global enterprise, with production facilities and product development centers located in the U.S. (Lancaster, PA); Mexico (Juarez) and Europe (Barcelona). We also support OEMs locally through a global network of distributor-partners. And, our associates are experienced working with global OEMs, resulting in a high degree of systems compatibility and speed-to-market.

The Future

At Maxima's Technology Center, our engineering team is developing a wide range of solutions for operator interfaces and control systems, as well products with RF capabilities. And, OEM customers rely on the Maxima team for advanced R&D projects and feasibility studies.
